

COBUS Windows and ADULO

Your Portal to a Simple Solution

From the combined knowledge and years of experience of COBUS ConCept and ADULO Solutions, emerges a powerful industry package for the production of windows.

Numerous details and variants need to be considered in the production of windows, from the selection of the material through the opening type and the glazing. It is therefore all the more important that all the details are easy to record and that the data is automatically transferred, enriched and passed on to all departments until completion and delivery of the window.

Your window will be ready for production with only a few clicks from the design stage to the finished machine program, complete with a list of parts, pricing, and production papers. Even with changes to existing designs, the process takes only a few minutes. The design of windows and accessories is recorded with the graphic support of the ADULO window designer in customer order processing. Here, all the necessary information for sales, purchasing and production is obtained and thus the drawings, CNC machine programs and production orders are generated.

COBUS Windows Features

Window Types from the Macro Library:

- User friendly
- Single or multiple sections
- Rectangular, round arch, segmental arch
- Fanlight, upper and lower fixed windows
- One- or two-winged patio doors
- Fixed glazing
- Create glazing bar patterns

Production Reports:

- Bill of materials
- Shop drawings
- Quotes
- Material orders

Production Strategies:

- Tool Optimisation
- 3D Profiling
- Placement patterns for single parts
- Automated clamp changes for single part production with automatic deactivation of milling operations on the clamp side
